DEPARTMENT OF THE MEDICAL OFFICER OF HEALTH,

TOWN HALL, SHEFFIELD,

SEPTEMBER, 1916.

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE.

GENTLEMEN,

VITAL AND MORTAL STATISTICS.

General.

The principal features of the Public Health statistics for 1915 as compared with those of the previous decade may be summarised as follows:—The birth rate was exceptionally low, and the death rates from Measles, Diphtheria, Bronchitis, Pneumonia and Tuberculosis of the lungs were exceptionally high. The deaths from Cancer were also above the average.

Population.

The estimate of the civil population of the City, made by the Registrar General, for the year 1915 was 476,012.

Marriages.

There has been a great increase in the marriage rate during 1915. This is brought out in Table 1. There were 843 more marriages in 1915 than in 1914. On the Registrar General's population figure, this gives a rate per thousand of the population of 20 ·6, which is higher than for any year of which we have records. The rate is somewhat overstated, because the Registrar General's population figure has been reduced by making an allowance for the members of the population who are serving in the Army. If, however, the population had been calculated in the ordinary way, the marriage rate would still have been 20 ·1 per thousand, a figure considerably higher than in any previous year.

Births.

The number of births registered during the year was 12,162, and the transferable births numbered 8 inwards and 31 outwards. The number of births allocated to Sheffield, therefore, was 12,139, which was less than in the previous year by 865. This figure gives a birth rate of 25 ·5 per 1,000 persons living. The average rate for the previous 10 years was 29 ·5. The annual rates were as follows:—

1905	 	 30 ⋅6	1910		 	28 ·I
1906	 	 31 ·1	1911		 	$27 \cdot 7$
1907	 	 32 ·3	1912		 	$27 \cdot 7$
1908	 	 32 ·3	1913	• • •	 	28 .2
1909	 	 29 .8	1914		 	27 ·3

This birth rate is the lowest ever recorded, and it will be seen that it is 1.8 per 1,000 lower than that for the previous year, and 4.0 lower than the average for the last decade. The decline in the number of births which has taken place since the outbreak of War applies equally to legitimate and illegitimate births. For the three years before the War, the percentage of illegitimate births was 4.4, during 1914 it was 4.3, and during 1915 it was 4.2.

Deaths.

The number of deaths of Sheffield residents during the year, exclusive of men in the Army, was 8,173 (4,444 male, 3,729 female), making a death rate of 17 ·2 per 1,000 persons living. This is the highest mortality rate since 1907 and has to be compared with 16 ·3 for the previous year and an average of 16 ·2 for the decade 1905-1914. The deaths of soldiers in Sheffield numbered 70.

The annual rates for the last 10 years were as follows:—

1905	 		17 .6	1910	 	 14 ·2
1906	 		17 -3	1911	 `	 16 ·1
				1912	 	 14 ·3
				1913	 	 15 .8
1909	 	• • •	15 .9	1914	 	 16 ·3

Small Pox.

There was no case of Small Pox notified during the year.

Measles.

A high death rate from Measles has to be recorded again, the death rate being 1.35 as compared with 0.77 for 1914, and 0.72 for the decade 1905-1914.

This is the highest death rate which has been recorded from Measles during the last 20 years with the exception of 1911. April, May and June were the months when the Measles mortality was heaviest.

As mentioned last year, the tendency recently has been to have shorter intervals between the epidemics.

Scarlet Fever.

The death rate from Scarlet Fever was 0·11 per 1,000 of the population, which has to be compared with 0·19 for 1914, and an average of 0·17 for the decade 1905-1914.

The attack rate was 4 ·6 per 1,000. The average attack rate for the decade 1905-1914 was 5 ·4 per 1,000 persons living, per annum. There were 19 cases among soldiers in the city.

Diphtheria.

The death rate from Diphtheria was 0.21 per 1,000 of the population. This rate is the highest since 1902 and is higher than the average for the previous 10 years by 0.09.

The number of cases of sickness reported during 1915 was 1,019, which is the highest number since the year 1901 and is 474 above the average of the previous 10 years. There were, in addition, three cases among soldiers in the city.

Whooping Cough.

The mortality from Whooping Cough was at the rate of 0.21 per 1,000 living, which is 0.28 lower than that for 1914, and 0.11 lower than the average for the previous 10 years.

Typhoid Fever.

The death rate from Typhoid Fever for 1915 was 0 ·04 per 1,000, which is the lowest on record.

The number of Typhoid cases notified during the year was 63, which compares with 113 for the previous year, and is the smallest number on record for any year since compulsory notification was adopted. The nearest number was 74 in 1913. There were, in addition, 5 cases among soldiers in the city during the year 1915.

At one time we looked forward with absolute certainty to the increase of Typhoid Fever in the autumn. The increase was usually more if the summer was hot. In 1911, in which the summer was hot, there was a considerable autumnal increase. In 1912 and 1913, the increase was much less marked. In 1914 and 1915, there was no autumnal increase in the prevalence of Typhoid Fever.

Diarrhæa and Enteritis (under 2 years of age). The death rate from Diarrhea and Enteritis (under 2 years of age) during 1915 was 0.86 per 1,000 living. This has to be compared with 0.89 for 1914 and 1913, and 0.30 for 1912.

Cerebro-Spinal Fever. During the year there were 3 notified cases of Cerebro-Spinal Fever, two of which were fatal.

Acute Poliomyelitis. Seven cases of Acute Poliomyelitis were notified and 2 deaths were reported from this disease during the year.

Tuberculous Diseases.

The death rate from all Tuberculous diseases was 1.78 per 1,000 persons living. During the decade 1905-1914 the rate was 1.62. The deaths from Tuberculosis of the Lung alone gave a rate of 1.37 per 1,000 which is higher than the rate for the preceding decade by 0.19.

1,219 new cases of sickness from Tuberculosis of the Lungs were notified during the year among the civil population, as compared with 948 in 1914, 1,033 in 1913, 981 in 1912, 836 in 1911, 667 in 1910, and 712 in 1909. There were, in addition, 13 cases among soldiers in the city during 1915.

By a General Order of the Local Government Board, dated 19th December, 1912, all forms of Tuberculosis became compulsorily notifiable from the 1st February, 1913. This has had the effect in Sheffield of bringing to the notice of the Medical Officer of Health 822 cases of Tuberculosis of other organs than the lungs during 1913, 458 during 1914 and 372 during 1915.

The death rates from all Tuberculous diseases during the last 16 years are as follows:--

1900	 	 2.93	,	1908		 	1 .78
1901	 	 2.07		1909			
1902	 	 1.80		1910		 	1 .39
1903	 	 2.11		1911		 	1.59
1904	 	 1 .88		1912		 	1 .67
1905	 	 1 .64		1913	• • •	 	1 .64
1906	 	 1.52		1914		 	1.68
1907	 	 1.70		1915		 	1.78

Infant Mortality.

The number of deaths of infants under one year of age was 1,619, as compared with 1,714 in 1914. The number of births in 1915 was 12,162 as compared with 13,004 in 1914. The Infant Mortality is usually recorded as the number of deaths occurring under the age of twelve months per 1,000 births during the same period, and the rate for 1915 calculated in this manner is 133 per 1,000 births as compared with 132 for 1914.

The following table shows the Infant Mortality rates for the previous 19 years in the City of Sheffield, and the excess over the English rate for each year.

YEAR.	Infant Mortality.	Excess over English Rate.	Year.	Infant Mortality.	Excess over English rate.

WORK OF THE TUBERCULOSIS DISPENSARY.

By John Rennie, M.D., Tuberculosis Medical Officer.

The Dispensary is situate in three of the Corporation flats in Hawley Street, and is open from 9.0 a.m. to 5.30 p.m., except on Saturdays, when the hours are from 9.0 a.m. to 12.30 p.m. Patients are seen on Mondays, Wednesdays and Thursdays in the mornings and afternoons, Tuesdays and Fridays in the afternoons and evenings, and on Saturday mornings. During the year Dr. William MacAdam took up military duties and Dr. Thomas W. Ruttledge was appointed; Dr. James Carrick also resigned and was succeeded by Dr. A. G. Hottlet. One of the School Medical Officers continued to attend at the Dispensary every Wednesday morning to assist in the work of treating tuberculous school children.

During the year 1,232 new cases of tuberculosis of the lungs were brought to the notice of the Health Department, an increase of 284 on the 1914 figures. Fifty-nine of these cases were not notified during life, but were obtained from the Death Returns of the District Registrars. Table A shows the notifications split up into sex and age periods.

Table A.—Notifications of Pulmonary Tuberculosis, divided into Sex and Age Groups.

	Under 1 year.	l and under 5 years	under	under	under	20 and under 25 yrs.	under	under	under	under	up-	Total.

TOTAL	9	45	125	94	82	129	218	243	167	86	34	1232

The number of new cases of non-pulmonary tuberculosis brought to the notice of the Health Department was 372 as compared with 458 for 1914. 104 were not notified during life. Table B shows these cases divided into sex and age groups whilst Table C shows the localisation of the disease.

401 of the 1,232 cases of tuberculosis of the lungs notified were known to be infectious, tubercle bacilli having been found in the sputum, as compared with 422 for 1914, and 419 for 1913.

On December 31st, 1915, there were 1,911 cases of tuberculosis of the lungs on the books, of whom 807 were known to be infectious, as compared with 618 infectious cases on December 31st, 1914.

It is estimated that 920 of the 1,232 notifications received came under the treatment and supervision of the Dispensary during the year.

Fifty-seven cases were known to have left the city, 50 were lost sight of, and 62 cases were cancelled as being free from any sign of active tuberculosis.

During the year the male tuberculosis inspectors visited 1,154 of the lung cases notified, and 351 of the non-pulmonary cases, and obtained the usual particulars. In the case of 78 notifications of pulmonary and of 21 of non-pulmonary tuberculosis the inspector was unable to obtain particulars, owing to the cases having no permanent place of residence, etc. Sixty periodic visits were made and 1,958 visits were made for special investigation and for disinfection after removal to hospital or to a new address, or after death. In 1,092 cases the house was sprayed throughout. The total number of rooms disinfected during the year was 5,882. Ten reports of structural defects in houses were made to the district inspectors of nuisances, and in 137 cases where the patient was employed in a factory or workshop a report was sent to the workshops inspector.

The women inspectors made 5,570 periodic visits to the homes of notified cases, and there were 1,495 patients on their visiting lists on December 31st, 1915. 264 of the remaining cases on the books were non-infectious cases in which the home conditions were satisfactory, and the others were cases in which the circumstances were such that periodic visiting was considered unnecessary.

The number of deaths from pulmonary tuberculosis was 653, including 33 deaths of Sheffield residents occurring outside the city, as compared with 607 for 1914; whilst there were 196 deaths from non-pulmonary tuberculosis including 6 deaths of Sheffield residents occurring outside the city, as compared with 192 for 1914. Table D shows the deaths from pulmonary and non-pulmonary tuberculosis split up into sex and age groups.

Table D.—Deaths from Tuberculosis, divided into Sex and Age Groups.

	Under 1 year.	l and under 5 years	5 and under 10 yrs.	under	15 and under 20 yrs.	under	under	35 and under 45 yrs.	under	55 and under 65 yrs.	65 and up- wards.	Total.

TOTAL	31	85	26	14	15	4	9	5	5	1	1	196

The total number of attendances at the Dispensary of all cases was 18,497, an increase of 1,481 over 1914.

NEW CASES.

Table E gives particulars of the new cases examined and the result of the examination. The number of "suspects" sent up for examination, namely, 684, an increase of 278 on the 1914 figures, is very satisfactory, and I take the opportunity of thanking the medical practitioners for their co-operation with the Dispensary in our efforts to diagnose and treat tuberculosis at its earliest possible stage.

During the year 45 patients were seen at their homes in consultation with the private practitioners and several old patients were also visited.

The number of notified cases who attended the Dispensary for treatment and supervision was 1,881, which is an increase of 762 on the figures for 1914, whilst the number of attendances made by the patients in this class was 13,609.

The total number of attendances made by Observation Cases was 3,695.

Table F gives particulars of the cases observed. 638 of the 993 cases added during the year were "suspects," sent to the Dispensary for diagnosis, and 355 were found by the examination of "contacts" of notified cases.

RESIDENTIAL INSTITUTIONAL TREATMENT.

The accommodation for institutional treatment has been very limited during the year, Winter Street Hospital having been taken over by the War Office in October, 1914, after which time it was gradually cleared of patients and completely handed over in January, 1915. To meet the circumstances, the accommodation at the Crimicar Lane Sanatorium was increased from 30 to 92 by the erection of temporary wards and a dining room. The total accommodation for males was thus reduced by 22, whilst that for females was reduced by 12, the Commonside Sanatorium, with 28 beds, being the only accommodation available for females.

Since January, 1915, the whole of the work in connection with the patients has been carried out by the staff of the Dispensary under the control of the Tuberculosis Medical Officer, and towards the close of the year Dr. Ruttledge went into residence at the Crimicar Lane Sanatorium.

Table G gives particulars of the numbers treated in the sanatoria during the year.

225 of the males and 148 of the females were admitted in the first instance as "observation" cases. Twenty-six of the cases admitted were discharged soldiers. The total number of patients who received sanatorium treatment during the year was 783.

Twenty places at the Open Air Recovery School were again reserved for definitely tuberculous children of the non-infectious type from the Dispensary, and one of the Tuberculosis Officers visited the school weekly.

POSITION OF SHEFFIELD AMONG THE LARGEST TOWNS.

Table A shows the birth-rates, death-rates and infant mortality rates in the 17 largest towns of Great Britain. The birth-rates vary from 28 4 in West Ham to 17 4 in Bradford. Five of the seventeen towns have higher rates than Sheffield. The death rates vary from 18 7 in Glasgow to 13 4 in Portsmouth. Eleven of the seventeen towns have lower rates than Sheffield, and two are equal with Sheffield.

The infant mortality rates vary from 87 in Portsmouth to 148 in Stoke-on-Trent. Thirteen of the towns had lower rates than Sheffield, and one is equal with Sheffield.

TABLE A.—BIRTH-RATES AND DEATH-RATES IN LARGEST TOWNS FOR THE YEAR 1915.

Voluntary Notification introduced November, 1899.
 † Compulsory Notification introduced November, 1903.

The deaths recorded under Municipal Hospitals previous to 1908 occurred in the City Fever Hospitals, the patients having been admitted for some other infectious disorder. Hospitals for the treatment of Consumptives have been opened as follows:—Moorend in 1908, Crimicar in 1909, and Winter Street in 1912. Crimicar Hospital was formerly reserved for Small Pox and Winter Street Hospital for other infectious diseases. Deaths of Sheffield residents which occurred in asylums, are not included in this table, as it is probably correct to say that in most cases the disease develops after the removal to the asylum for the mental trouble.

TABLE XIII.—Cases of Infectious Disease notified during the year 1915, shown under certain Age periods.

Total rainfall during year 34.538 inches.

Sanitary Administration.

HOUSING OF THE WORKING CLASSES ACTS, 1890-1909.

689 dwelling-houses were inspected for the purposes of Section 17 of the Housing and Town Planning Act, 1909.

Of these 689 houses, 106 were renovated, 13 were demolished, and in the case of 118 the work was in progress at the time of writing. Owing to the necessity for all work which is not imperatively necessary being postponed until after the War, the renovation of 451 of these houses with the exception of urgent matters has been left in abeyance.

CONVERSION OF PRIVIES INTO WATER-CLOSETS.

During the first few months of the year this work proceeded as usual, but in accordance with the wish of the Government the work was suspended about the middle of the year. Towards the end of the year arrangements were made for urgent privy conversion work to be put in hand and for the usual contribution to be paid out of current rates.

During the year, 1,538 privies were converted and 78 additional water-closets were provided, the corresponding figures for 1914 being 1,822 and 127 respectively. Full particulars with regard to the work will be found in table XIX.

The work done under the supervision of this sub-department represents an expenditure during the year 1915 of about £27,963, of which the Corporation's share amounted to £8,086.

CANAL BOATS ACTS.

The number of inspections of canal boats made during the year was 428. On the whole, the boats were in fairly good condition.

The total number of infringements complained of was 34 (relating to 23 inspections of boats).

The nature of the infringements was as follows:—

Absence of certificat	e, and cer	tificate	not id	entifyiı	ig own	er	• • •	19
Want of marking, let	ttering or	number	ring					10
Want of painting			• • •	• • •	•••		•••	2
Want of repairs	• •••			•••	• • •	•••	•••	3

								34

FACTORY AND WORKSHOP ACT, 1901.

Forty-one workshops and 15 home-workers were removed from the register during the year, and 1 bakehouse added, making a net decrease of 55 workshops.

The following are particulars of the 41 workshops removed:—5 workshops became factories owing to the introduction of electric power, namely, 2 wood-working establishments, 1 bakehouse, 1 tailoring establishment and 1 edge tool making establishment. 36 workshops were closed during the year, namely, 5 tailoring establishments, 6 dress-making establishments, 5 bakehouses (one of which was situated in the Scotland Street area and was pulled down), 14 file-cutting establishments, and 6 electro-plate working establishments.

The following are particulars of the 15 home-workers removed:—5 file-cutters, 2 pinafore makers, 8 silver burnishers.

With the exception of the baking trade scarcely any workshop has its ordinary complement of workers. The tailoring trade especially appears to have been the hardest hit by the war conditions. Two firms tried to adapt themselves to the factory system for producing soldiers' clothing, but soon closed down. Some of the better class tailors have been largely employed on officers' uniforms, but this source of trade appears now to have nearly ceased.

Large numbers of workers in the silver and kindred trades are now employed on some kind of war work.

Some difficulty has been met with during the year in securing the periodic limewashing of both bakehouses and ordinary workshops, and many occupiers have had to do this work themselves on account of the shortage of labour.

The following increased sanitary accommodation has been provided during the year:—Water-closets, 52, urinals, 8, and lavatories, 18. 26 of the water-closets and 11 of the lavatories were provided for female workers, chiefly clerks.

In addition to the work done in answer to notices shown in the table, the following matters were dealt with in response to verbal intimations.

Reconstructions of defective drains	•••	•••	•••	9
Pedestal closets substituted for trough closets	•••			8
Substitution of water-closets for privies		•••	• • •	2
Water-closets specially ventilated		•••	•••	4
Cellar drains provided			•••	2

The total number of visits made during the year were as follows:—

Visits to	factories		•••	•••	•••	•••			495
Do.	workshops			•••	• • •		•••	•••	1,321
Do.	workplaces	•••	•••		• • •		•••	•••	60

OFFENSIVE TRADES.

525 visits were paid to the 30 places where offensive trades are carried on.

During the year one gut-dressing place was closed and one fat-melting plant was established.

BLACK SMOKE NUISANCES.

Proceedings were taken in 5 cases as follows:—2 steel manufacturers and 3 haulage contractors. The results of the proceedings were as follows:—In one case a fine of £1 ls. 0d. and costs, in two cases fines of 15s. and 10s. respectively including costs were imposed; in one case an order was made and the remaining case was dismissed.

5,079 observations lasting for one hour each were made of chimneys during the year. Black smoke was emitted on the average for 3 ·2 minutes per hour, which has to be compared with the following figures for the last 11 years:—

1904	1905	1906	1907	1908	1909	1910	1911	1912	1913	1914
3 ·1	3.0	2.9	3.2	2.9	2.4	2.4	2 .2	2.5	2.6	2.6

GENERAL SANITARY WORK.

The work with regard to nuisances, defective drains, infectious diseases, milk shops, etc., has proceeded as usual.

The suspension of the privy conversion work in the middle of the year has had the effect of lessening the amount of drainage reconstruction work. Some extra work has been thrown on the staff in connection with the inspection of billets, the provision of santiary accommodation for temporary quarters for soldiers and the abatement of various nuisances arising in connection with these matters.

DISINFECTING STATION.

The Disinfecting Station has been working at full pressure during the year and considerable demands have been made upon it by the Military Authorities.

SALE OF FOOD AND DRUGS ACTS.

The number of samples of milk purchased during 1915 was 425, of which 30 were deficient in fat, 32 contained added water, 1 contained a boron preservative, and 7 were just below the standard.

In 61 cases proceedings were ordered, in 5 cases proceedings were withdrawn, after investigation of the circumstances, and in 14 other cases proceedings were withdrawn on payment of costs.

Milk.

The following list shows the penalties imposed and the amount of adulteration in each case :—

Sample No.	Amount of adulteration.	Amount of penalty.
328	19 per cent. of added water.	£1
329	9.5 ,, $,$	£2 and 18/6 costs.
330] 10 ,, ,,	£2 and 18/6 costs.

^{*} Previous conviction against vendor.

One dealer was prosecuted under Section 4 of the 1879 Act for refusal to sell. A penalty of £5 and 10/- costs was inflicted. An informal sample was taken from one of this dealer's customers and was found to contain 23.4 per cent. of added water.

In the case of samples marked with an asterisk there were previous convictions against the vendors, as follows:—

In the case of J vendor there was 1 previous conviction.

- , , 2 vendors there were 2 previous convictions.
- "," ,, I vendor there were 5 previous convictions.

It is quite obvious that the smallness of the penalties is no deterrent to adulteration. If penalties such as those sanctioned by the Acts were imposed more frequently one cannot help feeling that milk adulteration would soon cease. The maximum penalties are as follows:—

For the first offence, £20.

For the second offence, £50.

For the third offence, £100, with or without three months' imprisonment.

Other Foods. The following numbers of samples of other articles were taken and found to be genuine:—Butter 72, Pepper 16, Lard 17, Cheese 22, Camphorated Oil 8, Compound Liquorice Powder 13, Sweet Spirit of Nitre 7, Margarine 4, Dripping 1, Coffee 1.

Spirits.

Twenty-eight Whiskey samples were taken, and 4 were found to be below the standard. The fines imposed were :—one of £2 and 5/- costs, one of £1 and 10/- costs, and two of £1 each.

Twenty-seven samples of Rum were taken and 7 were found to be below the standard. The fines imposed were:—one of £2 and 5/- costs, one of £1 and 10/- costs, one of £1, and the other four persons were cautioned by letter.

Twenty-six samples of Gin were taken and 3 were found to be below the standard. One fine of £1 was imposed and the other two vendors were cautioned by letter.

Informal Samples.

Six informal samples of preserved Cream were taken. Five complied with the Milk and Cream Regulations. One contained 0.26 per eent, of boric acid in excess of the limit prescribed by the Regulations.

One informal sample of Dripping was taken and found to be adulterated with 50 per cent. of water.

MATERNITY AND CHILD WELFARE WORK.

The attendances at the Baby Consultations show a large increase. The following are the attendances since the work was begun in August, 1907:—

Part I. of the Children Act						20

Midwives Act, 1902. At the end of the year 1915 there were 61 midwives in practice on their own account in Sheffield. Of this number 25 were certified by examination, 5 had had twelve months' training at a lying-in hospital, but had not sat for any examination, and 31 were untrained midwives, who were in bona-fide practice as such at the time of the passing of the Act.

There were 137 visits of inspection paid to midwives at their own homes during the year. According to the rules of the Central Midwives Board, notifications have to be sent by midwives under certain circumstances.

There were 193 notifications of still-births received from midwives, 106 having reference to full-time births and 87 to premature births. In each of the latter cases a burial certificate was issued by the department after enquiry had been made.

The number of notifications received that the midwife had been obliged to send for medical help was 549.

The reasons for sending for medical help, as far as can be ascertained, were as follows:—

- (1) Abnormal presentations, namely:—Funis, 2; Transverse, 7; Face, 11; Breech, 11; Foot, 5; Shoulder, hand or arm, 6; Right Occipito-Posterior, 10.
- (2) Causes affecting the child, namely:—Debility, 26; Asphyxiation, 9; Prematurity, 39; Spina Bifida, 2; Convulsions, 9; Ophthalmia, 48; Jaundice, 3; Cleft Palate and Hare lip, 1; Umbilical Hæmorrhage, 5; Miscellaneous, 17; total, 159.
- (3) Causes affecting the mother, namely:—Placenta Prævia, 5; Ante-partum hæmorrhage, 13; Post-partum hæmorrhage, 25; Uterine Inertia, contracted pelvis and undilated os, 79; Adherent placenta, 27; Adherent membranes, 2; Laceration of perinæum, 73; Rise of temperature, 52; Eclampsia, 2; Miscarriage, 5; Prolapse of uterine wall, 2; Phlebitis, 6; Miscellancous, 36.

Puerperal Fever.

There were 64 cases of Pnerpcral Fever notified during the year, of which 30 ended fatally. There were 79 visits paid with regard to these cases. In 22 cases the confinement was attended by a medical practitioner and 11 of these cases ended fatally. In one case which ended in recovery the confinement was attended by a medical practitioner and a midwife. Three cases occurred inside the Jessop Hospital, two of which ended fatally, and one case occurred in the practice of the Jessop Hospital district midwife, which also ended fatally. Two cases occurred inside Firvale Hospital which both ended fatally. There were five cases in connection with abortions which were not attended by either a medical practitioner or a midwife, and four of these ended fatally. In one other case an inquest was held and the verdict returned was—
"Wilful murder against some person or persons unknown." There were 29 cases in connection with the practices of midwives and 9 cases ended fatally. There were two fatal cases in the practice of one midwife, and one case each in the practice of 7 midwives.

Since July 1st, 1915, the Corporation have maintained two beds at the Jessop Hospital for Women for cases of Puerperal Sepsis. During the six months from July 1st to December, 8 patients were under treatment for an aggregate of 299 days. Three cases ended fatally and five in recovery.

Ophthalmia Neonatorum. There were 189 cases of Ophthalmia Noonatorum notified during the year. Of this number 19 occurred in confinements attended by medical practitioners, and of these, in one case the child lost the sight of both eyes, and in two other cases the eyes were left weak.

There were 168 cases which occurred in confinements attended by midwives. Of these, in two cases the child lost the sight of one eye. In three other cases the child died from another cause during the attack; and in two other cases the family removed and could not be traced.

Two cases occurred in connection with confinements in the Jessop Hospital and Sheffield Union Hospital respectively, and in both cases recovery without damage took place.

The figures given above do not correspond with those given in the reports of the Local Government Board, because the samples certified by the City Analyst to be below the standard, but not certified to be adulterated, are not included in the columns "No. Adulterated."

REPORT OF THE CHIEF VETERINARY INSPECTOR FOR THE YEAR 1915.

VETERINARY STAFF:

During the year the staff consisted of the Chief Veterinary Inspector and one assistant, the work being necessarily curtailed owing to shortage of assistance.

TRAM AND OTHER ACCIDENTS.

Twenty-seven cases of alleged damage to animals due to tram accidents were investigated, and reports made to the General Manager of the Tramways.

SLAUGHTER-HOUSES.

The following list shows the number of slaughterhouses in the City at December 31st, 1915 :-No. of Slaughterhouses belonging to the Corporation and in use previous to 1865 No. of Slaughterhouses in use previous to 1865, of which there is no evidence 8 of registration No. of Slaughterhouses now in use and on the Register drawn up in 1865 under the Town Improvement Act, 1847. 10 No. of Slaughterhouses licensed under the Public Health Act, 1875 No. of Slaughterhouses licensed annually under the Sheffield Corporation 76 Act, 1890 1 No. of Horse Slaughterhouses licensed ... Total No. of Slaughterhouses on the Register 158 . . .

Eight slaughterhouses were transferred to new occupiers during the year.

One new annual licence has been granted and two have been allowed to lapse. One licence under the P. H. Act, 1875, lapsed owing to death of licensee. Two slaughterhouses for which there was no record of licence or registration, are now used for other purposes.

MEAT AND FOOD INSPECTION.

The following represents the work of meat inspection—

No. of visits to Slaughterhouses	 	 	 3,677
No. of visits to Market Places and Shambles	 	 	 2,050
No. of visits to Shops and Stores	 	 	 2,566

In connection with Meat Inspection 306 notifications of 509 diseased or suspected animals or carcases were received from butchers, 62 being in respect of carcases in private slaughter-houses, and 244 in respect of carcases in Slaughter-house 42 in the Killing Shambles, the slaughter-house set apart by the Health Committee for butchers to kill and dress suspected animals and carcases as the case may be. After inspection of the 509 carcases, 287 were passed as fit for human food, the diseased parts (if any) being first removed and destroyed, and 222 were condemned, being afterwards voluntarily surrendered by the owners for destruction. A payment of 1s. 6d. per cwt. is allowed by the Health Committee to the owners for carcases so notified, surrendered and destroyed.

The following summary includes all carcases and articles of food condemned:-

- (1) Fresh Meat.—(a) Affected with Tuberculosis—61 carcases of beef; 6 beasts' offals; 5 beasts' heads; 5 beasts' hearts; 96 beasts' lungs; 33 beasts' livers; 4 beasts' spleens; 21 beasts' udders; 6 beasts' viscera; 2 beasts' kidneys; 6 pieces of beef; 8 beasts' stomachs; 6 pigs' carcases; 1 guts; 14 gut fat.
 - (b) Affected with other diseases or decomposing—12 beasts' offals; 3 beasts' heads; 3 beasts' hearts; 14 beasts' lungs; 36 beasts' livers; 14 beasts' spleens; 11 beasts' udders; 4 beasts' kidneys; 1 pig's offals; 9 carcases of pork; 1 pig's head; 2 pigs' lungs; 5 pigs' livers; 1 pig's spleen; 2 pigs' udders; 3 sheeps' offals; 1 sheep's head; 1 sheep's lungs; 2 sheeps' livers; 4 pieces of veal; 2 calves' offals; 2 calves' heads; 2 calves' lungs; 2 calves' livers; 1 calf's spleen; 1 leg of lamb;

- l leg of mutton; 40 carcases of beef; 6 beasts' stomachs; 54 carcases of sheep; 4 pieces of pork; 3 pareels of pork bones; 6 careases of lamb; 10 cowheels; 46 carcases of veal; 7 bags beasts' offals; 1 bag beasts' eheeks; 6 pieces of mutton.
- (2) Preserved Food.—4494 tins of canned food.
- (3) Foreign and Frozen Meat.—7 bags and 88 pieces of beef; 1 box, 1 barrel and 2 bags of tripe; 45 dozen sheeps' kidneys; 2 cases pigs' pluck; 1,069 lbs. beef; 5 boxes lambs' livers; 1 case sheep's plucks; 2 barrels pigs' offals.
- (4) Game, ctc.—719 couples of rabbits.
- (5) Poultry.—6 couples fowls; 36 wood pigeous; 1 couple dueks.
- (6) Fruit.—12 cases of pears.
- (7) Vegetables.—3 boxes radishes; 2 baskets of mushrooms; 60 crates of lettuce.
- (8) Fish.—451 boxes, barrels, crates, etc., of various species.

The total weight condemned during the year was 36 tons 10 cwts, of meat; 35 tons $11\frac{1}{2}$ cwts, of fish; and 21 cwts, of fruit and vegetables.

MEAT PROSECUTIONS.

During the year three magistrates' orders were required for the condemnation and destruction of bad meat. Four prosecutions were ordered by the Health Committee, one defendant being fined £25, one £10, and the other two £5 each.

DAIRY INSPECTION.

During the year over 600 visits were made to dairy farms within the city. Two new cowsheds were built during the year, giving accommodation for 12 cows.

The number of eowshed premises inside the city was 211, having 354 eowsheds and accommodation for 2,910 cows. The occupiers of 6 of these premises (=23 cows) have given up keeping cows to produce milk for sale. The total maximum number of eows kept in the city was 2,598.

During the year 584 samples of mixed milk coming into Sheffield were taken for bacteriological examination, 53 of which, equal to 9.1 per cent., gave a positive result, whilst 531 were negative. 323 of the mixed samples came into the City by road conveyances, 28 of which (8.6 per cent.) were tuberculous, whilst 261 came by rail, 25 of which (9.5 per cent.) were tuberculous.

In following up the 53 tuberculous samples, 78 visits were made to 55 farms, and the udders of 770 cows examined. At 17 of these farms 19 cows with tuberculous udders were found. At the remaining 38 farms no cows with tuberculous udders were found, and subsequent control samples of the mixed milk from these farms were proved negative by bacteriological examination. In most of these instances the farmers had sold cows off the farms during the period intervening between the taking of the tuberculous mixed sample and the date of the inspection. Two farms were visited because the milk sellers obtained part of their milk supplies from them.

The average number of cows found at the 55 farms from which tuberculous mixed samples were sent was 14, and if we allow that number for the 527 farms from which the negative mixed samples were sent, we have 7,378 cows, the milk from which was examined bacteriologically and proved negative. The total number of country cows examined either clinically or (through their milk) bacteriologically, will thus total up to 770(+7,378) 8,148, amongst which 19 cows with tuberculous udders were found, equal to a percentage of 0.24. If we take the percentage of 19 tuberculous udders amongst the 770 country eows clinically examined, the figures work out at 2.4 per cent.

Control Samples.—Altogether 131 control samples were taken, 45 representing 41 farms and 657 cows, being taken from country herds, and 86 representing 59 farms and 1,116 cows, from city herds.

Eight of the country samples, equalling 17.7 per cent., and nine of the city samples (10.4 per cent.) were found to be tuberculous. At some of the country farms difficulty in finding the cows giving tuberculous milk was met with and several control samples had to be repeated.

Special Samples.—A total of 94 special samples were taken, 53 being from City cows, 17 of which (32 per cent.) were positive and 41 from country cows, 11 of which (28 per cent.) were positive.

Including country eows examined 94 showed symptoms suspicious of Tuberculosis of the udder, and a sample of milk was taken from each of them for bacteriological examination. 28 proved positive, 66 giving negative results. Ten city cows were condemned on microscopical examination of the milk alone, making a total of 38.

The 38 cows thus definitely proved to have tuberculous udders were disposed of as follows:— 10 were sold by the owners and were lost sight of; and 28 were killed, the carcases of 18 being passed as human food after the diseased parts had been first removed and destroyed, and 10 totally condemned, and the carcases destroyed at the destructor or knackers' yards.

DISEASES OF ANIMALS ACTS AND ORDERS.

ANTHRAX.

Six suspected outbreaks of Anthrax were reported on premises in the city. Each case was investigated and the presence of the disease was confirmed in 3 cases.

GLANDERS AND FARCY.

One case was reported, 2 animals being attacked.

PARASITIC MANGE.

The Parasitie Mange Order was again brought into operation on March 28th, and 17 suspected outbreaks of this disease in studs in the city were dealt with. In 16 cases the existence of the disease was confirmed. Seventeen horses were affected. All were isolated and medically treated until cured or slaughtered. Thirty-eight in-contact horses were also inspected.

SWINE FEVER.

Two hundred and sixty-two cases of illness or death of pigs were reported during the year. In 45 cases the symptoms or post morten appearances were suspicious of Swinc Fever, and the cases were consequently reported to the Board of Agriculture and Fisheries in compliance with the Swine Fever Order. These eases were investigated by the Veterinary Inspectors of the Board, and 27 were confirmed as Swine Fever. Owing to the large number of pigs which had been directly or indirectly in contact with the affected pigs, 40 notices of detention and isolation had to be served, 283 pigs being concerned. Nearly one hundred visits had to be made to see the Orders were being observed. Two prosecutions were ordered for offenees in connection with Swine Fever and movement of swine. Fines of £5 and £2 were imposed.

SWINE MOVEMENT ORDERS.

The following summary shows the number of pigs for which movement licences were issued during the year:—

Number o	of store pigs licensed into the city		3,189
,,	fat pigs lieensed to sale yards and slaughterhouses in the eity		57,292
,,	fat pigs licensed from sale yards to slaughterhouses in the city	•••	41,405
,,	fat pigs licensed to slaughterhouses outside the eity		3 996

SHEEP DIPPING.

In the first period the number of sheep dipped was 392 and in the second 360. The portion of Sheffield lying between the Midland Railway from Chesterfield and the Great Central Railway from Penistone is included within the Yorkshire (West Riding) and Peak District (Sheep Dipping) Order of 1912. This Order is still in force. To comply with this Order sheep had to be dipped twice during the month of September with not less than 10 days and not more than 21 days interval between the first and second dippings. Three owners, having 83 sheep, complied with the Order. Three owners not included in the above area gave notice of two dippings each, 392 and 360 sheep being dipped at the respective dippings.

RABIES.

There was one suspected ease of rabies to investigate during the year, but the existence of the disease was not confirmed.

2

Foreign Dogs.

During the year 3 foreign dogs were licensed into the city, under the Importation of Dogs Order of 1901. They belonged to 2 different owners, and all were dogs performing at Sheffield music halls. Three visits were paid to see that the Board of Agriculture's conditions were being complied with by the owners.

ANIMAL TRANSIT.

Repeated visits were made to the railway stations and cattle landings for the purposes of the Animals (Transit and General) Order of 1912, and the Exportation of Horses Orders of 1910.

HORSE SALES.

The weekly auctions of horses and the horse fairs were regularly visited as required by the Glanders and Farcy Order of 1907.

MARKETS AND SALEYARDS.

Repeated visits were made to the Calf Market, and the saleyards authorised for the sale of pigs.

VETERINARY CHARGE OF CORPORATION HORSES.

In connection with the treatment of sick and lame horses in the Corporation studs, 372 visits were made to 11 stable depots. Veterinary advice was also given to the different committees in connection with the purchase of new horses and the sale or slaughter of horses unfit for further service owing to disease, lameness, etc.

Appended is a table showing the number of visits to each stable depot.
